

Table 10. Blood Pressure Screening, Combined Years 1991-1993

These are estimated percentages of adults (age 18+) who reported having had their blood pressure taken by a doctor, nurse or other health professional within the past year. Percentages were estimated by aggregating data from interviews conducted from 1991 to 1993.

Statewide, there was a statistically significant decrease over this time period in the percentage of adults reporting that they had their blood pressure checked within the past year.

	Percent Estimate	95% Confidence Interval (+/-)	Number of Respondents
